

Making the Difference in Printed Circuit Boards for over 40 Years!

Wednesday, May 05, 2009

For Immediate Release

Calumet, MI, USA

Calumet Electronics announces the acquisition of Laser Direct Imaging capability.

Laser Direct Imaging (LDI) of printed circuit boards uses a laser to image a pattern directly onto a photo resist-coated panel, completely eliminating the production and use of a traditional photo tool. The most obvious benefits of LDI are the time and handling defects associated with the creation, use, handling and storage of photo tools. "Our customers want more flexibility, shorter lead times, and smaller production lots for prototyping and new product introduction applications" explains Stephen J. Marshall, National Sales Manager, "This addition to our imaging capability enables quick response to these opportunities without burdening existing production resources."

Calumet is now operating an Orbotech DP-100 Direct Imaging System and offers a video presentation on the application on its web site. For further information visit;

About Calumet:

Calumet Electronics is in its 41st year of manufacturing hi-reliability printed circuit boards. Every board is proudly built in the security of its Calumet, MI, USA facility. The company is registered as a Small Business by the SBA and a certified HUBZone Enterprise. Financial strength is continually rated at 4A1 by D&B. Product realization is achieved within a quality system registered to ISO9001:2000 and certified by the Department of Defense to Military Performance Specifications for Printed Circuit Boards; MIL-PRF-31032 and MIL-PRF-55110. Corporate focus hasn't changed in over 40 years; provide optimum value in every board and to every relationship! At 41, Calumet remains committed to providing value beyond performance!
